# Flexible, scalable connectivity for Europe's AI innovators

AI is fundamentally reshaping Europe's reliance on data networks. The problem: nobody knows what that reshaped demand will look like. If you operate at the forefront of AI innovation, you need to be ready for anything—and that makes your choice of connectivity partner crucial.

Whether your business is in training models, running inference clusters, offering GPUs as a service, or deploying neo/micro data centres, you need a network that can scale to handle unpredictable demand.

- While 100G may seem like plenty capacity for the datasets you handle today, it makes sense to have a clear path to 400G (and beyond)
- While you may have the right latency for your customers' current needs, emerging real-time use cases may demand lower latency in the future
- While your workloads may be handled in one data centre today, tomorrow they may need to be distributed across multiple data centres—both edge and core—in multiple geographies

---

## A connectivity partner for whatever the future brings

The next best thing to a crystal ball is a connectivity partner that can ride the uncertainty wave with you. One that can scale capacity as your rocketship accelerates. With robust security, diverse routes, assured performance, flexible terms and an operations team that's there for you 24/7.

For xxx companies across Europe, that partner is Zayo Europe.

## Connectivity that scales as you grow

**“Going through our journey, we need a network to scale with us. Zayo will be a critical partner in reaching that objective.”**

Refugio Fernandez, Head of Supply Chain, Dropbox

# Fast, flexible connectivity for every AI growth curve

### What we offer

- Wholly-owned, 400G-enabled European network with path to 800G per wavelength
- 99.9% uptime on all fibre routes
- Flex capacity to handle bursts of massive, unpredictable throughput
- Diverse, low-latency European routes for assured connectivity and performance
- High-speed, high-capacity datacentre-to-datacentre and edge-to-core interconnect

### Global Cloud on ramp Presence

- Direct, private connection from any location to every major cloud service provider
- Enabling high availability, scalability, and resilience for multi-cloud solutions that support a distributed computing architecture

### Flexible commercial models

- Connectivity tailored to your current business model and growth strategy
- Transparent, predictable agreements with no hidden upgrade costs
- Flexible, innovative commercial approach

### Robust cybersecurity

- Built-in physical security on all fibre routes
- Flexible, predetermined security policies, firewalls, and encryption options

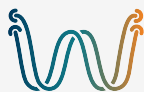

### A foundation for innovation

- Robust, scalable infrastructure to underpin emerging AI business models
- Support to diversify your products, services and data centre locations
- Faster introduction of disruptive, innovative, and profitable services

## Full portfolio of services for AI companies
